

PORTFOLIO MANAGER'S COMMENTARY

FRIEDBERG GLOBAL-MACRO HEDGE FUND LTD. Q3 2015

September 30, 2015

Please find below a discussion of our funds' latest performance.

It is with great satisfaction that we write to you about our Funds' activities for the third quarter of 2015. Results improved, with the Global-Macro Hedge Fund Ltd. earning 18.3%, erasing the losses sustained in the second quarter and bringing year-to-date gains to 11.7%. We have often commented on the somewhat arbitrary practice of demarcating returns on a quarterly or year-to-date basis, preferring instead to focus on year-over-year returns as a metric of the success of an investment strategy, and it is gratifying to report that we have, for the first time in many quarters, achieved a solid year-over-year increase of 19.7%. The Asset Allocation Fund Ltd. unfortunately lost 4.1% for the quarter, bringing year-to-date losses to 5.1% and year-over-year losses to 3.8%.

The overwhelming majority of the gains in the Global-Macro Hedge Fund Ltd. were earned by short equity positions in the U.S., Brazil, and India, earning a combined 13.0% for the quarter. In the case of U.S. equities, in which we have maintained and continue to maintain a bullish stance, the gains in shorts came from targeting opportunities in strained energy companies, biotechnology, and some over-owned and over-valued technology companies. This was consistent with our goal of identifying absolute gains independent of the overall market. Equity gains were further supported by a gain of 4.6% in deep out-of-the money puts on the S&P, a position we have periodically taken as a hedge against our long exposure when market conditions, namely underpriced volatility, offer them at bargain prices.

Sensing a technical problem with the market that had been worsening for several months, as indicated by a lack of breadth, a paucity of new highs, and an expansion of new lows, we persisted in buying these puts, sometimes getting bloodied but eventually making a score. The severe equity market volatility in late August resulted in an enormous spike in implied volatility, which, through these options, led to similar volatility in our NAV. In the end, the options were liquidated and more than offset the quarterly loss of 3.6% from our long equity positions.

The balance of the quarterly gains came from our short position in crude oil futures, which contributed 500 basis points to the NAV. This position, initiated with the idea that technological developments in energy extraction would expand supply and suppress prices, benefited greatly from a Saudi drive to regain market share as well as the effects of emerging market (EM) weakness. As the bearish story got more confident and found widespread acceptance, we cashed out.

We have continued to build around some of our long-standing themes, particularly U.S. homebuilders, airlines, and Nikkei futures. We have also recently added Canadian banks, which will come to represent a 20.0% exposure for the Fund. Canadian banks have been knocked down from their highs in large part owing to the weakness in commodities, but nevertheless offer impressive yields of around 4.5% from one of the most conservatively managed global banking markets as well as exposure to a potential recovery in the Canadian dollar. We remain constructive on U.S., U.K., and Japanese economies and assign blame for the September weakness in equity markets to misguided concern about the potential impact of China and other emerging markets on developed markets. We see the risk from China as more psychological than real, as capital controls have essentially isolated its markets from those of the developed economies. Other EM problems are more localized, such as in Brazil, Malaysia, Indonesia, and Russia. In Europe, the burden of debt is being pushed onto later generations of taxpayers instead of the private sector and is therefore not likely to derail, in the near term, well grounded recoveries in developed equity markets.

As discussed in our previous letter, we continued to lower overall gross leverage, which fell from 3.0x at the end of the second quarter to 2.5x at the end of the third. Again, good selection is the key ingredient for success, but low leverage ensures that losses in adverse moves are relatively modest, allowing us to take advantage of better prices to build up positions, rather than liquidate them to manage risk, as has happened in the past when leverage grew too high. At the same time, it focuses our attention on the most compelling trades and forces us to eliminate poorly performing positions more rapidly to make room for better prospects.

The current leverage is composed primarily of long and short equity positions, representing 137.9% and 68.5% respectively of NAV. Take note that the excess longs relative to shorts do not represent an inherently bullish bias but rather represent the end result of a bottom up approach that focuses only on specific opportunities. We make no attempt to balance our longs and shorts. Directional bets are carried out via index futures and options.

The Asset Allocation Fund Ltd. lost 4.1% for the quarter and is now down 3.8% year over year. All major asset categories contributed to the negative quarterly results: fixed income (1.1%), equities (2.7%), and commodities (0.7%). The fixed-income category, represented mostly by TIPS, was affected adversely by commodity deflation and the consequent fall in break-evens. We intend to maintain the allocation to TIPS around these levels for the foreseeable future, both because we believe that they are trading extremely cheaply relative to their longer-term potential and because of their safe-haven characteristics.

We increased the allocation to equities steadily during the quarter, as stock prices came down and became more attractive. At this writing, equities represent approximately 56% of total assets, their highest allocation since the Fund's inception. This emphasis reflects the fact that equities, by virtue of their historically large risk premium, constitute far and away the most attractive investment category of all.

Note that we included in this equities category an allocation to a group of companies heavily in disfavour and available at bargain basement levels, namely gold mining shares (700 basis points), and expect to add to this position in coming weeks. Commodities, gold among them, suffered substantial losses during the quarter, though the decline appears to be slowing and will probably begin to revert soon under the impact of production cutbacks.

The Fund is very conservatively run; it has a relatively low turnover rate, makes changes in asset allocation in a very slow and deliberate way and primarily with a view to medium- and long-term outperformance, uses options only for hedging purposes, does not short investments, and does not use leverage. It faithfully reflects our macro scenario, though, as I stated, does not bet on declining prices in any of the investment categories. As a result, volatility is considerably lower than that of its more aggressive cousin, the Global-Macro Hedge Fund Ltd. In the race between the tortoise and the hare, as we once mused, the race does not always to the fastest go.

A brief word on outlook. With the major economies — U.S., U.K., Germany, and Japan — coming very close to practical full employment and with monetary aggregates in some of these countries (the U.S. in particular) beginning to grow at an accelerated pace, inflation will begin to pose serious problems, especially in the growing services and non-tradable sectors. The Fed's reluctance to stay ahead of the curve will compound and protract these problems. The cost to global economies of the ultra-cheap money policies of recent years will only now begin to become apparent. The investment landscape will soon change and become unrecognizable to most observers. As always, the surprise will create interesting trading opportunities. We are acutely cognizant of this strong possibility and fully intend to take advantage of it.

Thanking you for your continuing trust,

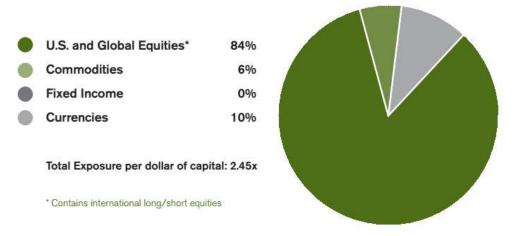

Albert D. Friedberg

Jaime A. Macrae

Global-Macro Hedge Fund Ltd. (Cayman)

Breakdown by Total Gross Exposure AS OF SEPTEMBER 30, 2015

FRIEDBERG ASSET ALLOCATION FUND LTD.
